## 62GB Miniature Bayonet 10-76 Connector Variant

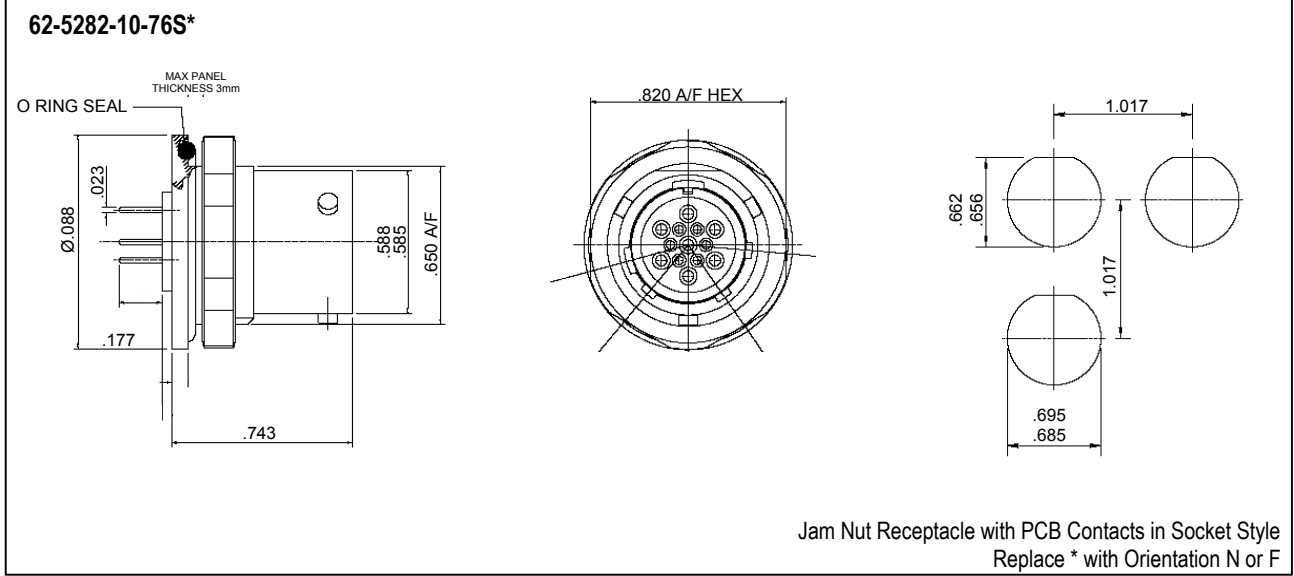

The miniature bayonet connector series offers designers important features not found in any other range of connectors. They are developed and manufactured entirely in the U.K. 62GB connectors have been well established globally on both industrial military communication projects, including Europe, Canada and India.

- 10-76 has a plating finish of zinc cobalt olive drab.
  - This has a high resistance to corrosion and has been dictated on Bowman in the U.K.
- Shell size 10 throughout the connector range
- Contacts are gold plated and 10-76 planform consists only of 7 size 20 contacts and 6 size 22 contacts
- Operating temperature is  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$
- Shells are keyed to prevent mismatching between shells of different orientations
- Designation F is for Radio Audio, N for Data and E for Ethernet.
- Orientation N is for Data
- Other orientations available are B and C

The 10-76 series is designed specifically to be backward compatible with the Clansman 10-07 planform that has been in use over the last thirty years. It is specified on the Bowman radio system.

A 10-76 receptacle that has socket contacts will mate with a 10-07 plug that has pin contacts.
